

# Your Dashboard

## Understanding Your Device Manager

Your SwiftConnect™ Device Manager network dashboard offers a number of quick statistics on your WiFi sites. If you only have access to one site, your information will popup automatically. If your role or license allows for multiple sites to be connected you will see a dropdown menu. Use the dropdown menu to select the site dashboard you would like to load.

### SWIFT STATS

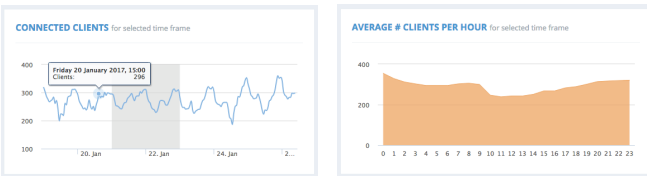

A quick-look overview of the users and usage on your site.

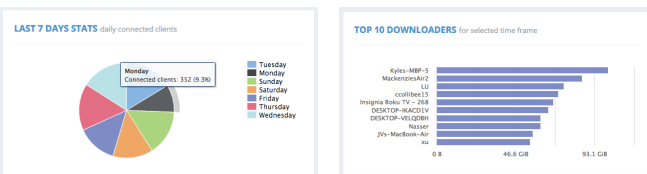

### CLIENT DATA

**Connected Clients:** The number of clients online at a given time on a given day.

**Average Number of Clients Per Hour:** Pretty self-explanatory!

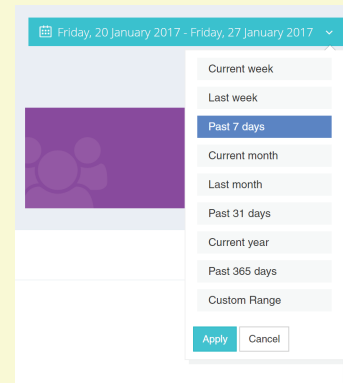

**Last 7 Day Stats:** The daily number of connected clients, also given in percentages based on the overall weekly connected clients.

**Top 10 Downloaders:** The 10 devices on the network that have used the most bandwidth. This can be useful to determine if someone is abusing the WiFi services.

### WAIT, THERE'S MORE...

You can adjust the time range using the date selector in the upper right part of the page as shown below:

### USAGE DATA

**Data Traffic:** The amount of bandwidth being used at a given time on a given day.

**Most Active Access Points:** Knowing how many users are utilizing each access point can help you determine if you need to add more coverage to an area to spread the load.
